

CAN Adapters: Have to relay data from one CAN bus line to another, is that possible?

Yes, the devices [named NetCAN Plus](#) transfer CAN bus data via network. Usually the network destination is a PC, but another NetCAN is also an option. For the second configuration the name **CAN bridging** is coined.

The NetCAN Plus may operate as pairs, or in a one-to-many fashion. There is a separate article describing the connection options. Please [read that](#) .
