

## *OnRISC: OpenRISC has changed to OnRISC. How do I update my source repository from new location?*

If you have already checked out the kernel this way:

```
svn co svn://svn.visionsystems.de/linux-2.6.33-OpenRISC/trunk linux-2.6.33-OpenRISC/trunk
```

you can use `svn switch --relocate` command to change repositories source:

- cd linux-2.6.33-OpenRISC/trunk
- svn switch --relocate svn://svn.visionsystems.de/linux-2.6.33-OpenRISC  
svn://svn.visionsystems.de/linux-2.6.33-OnRISC
- svn update
