OnRISC: How to bound USB mass storage device to some specific mounting point?

```
<!--
@page { margin: 2cm }
P { margin-bottom: 0.21cm }
-->
```

To achieve this you'll
need to add udev rule to /etc/udev/rules.d/custom.rules. For example
bound USB stick with name "DataTraveler 2.0" to /dev/mobilex
add following rule:

Â

```
BUS=="scsi",
SYSFS{model}=="DataTraveler 2.0",
NAME{all_partitions}="mobile"
```

Â

This will create a bunch
of /dev/mobilex files instead of /dev/sdx files:

Â

```
brw-rw---- 1 root floppy 8,  5 Jul 28
16:06 /dev/mobile
```

```
brw-rw---- 1 root floppy 8,  1 Jul 28
16:06 /dev/mobile1
```

```
brw-rw---- 1 root floppy 8, 10 Jul 28
15:44 /dev/mobile10
```

```
brw-rw---- 1 root floppy 8, 11 Jul 28
15:44 /dev/mobile11
```

```
brw-rw---- 1 root floppy 8, 12 Jul 28
15:44 /dev/mobile12
```

```
brw-rw---- 1 root floppy 8, 13 Jul 28
15:44 /dev/mobile13
```

brw-rw---- 1 root floppy 8, 14 Jul 28
15:44 /dev/mobile14

brw-rw---- 1 root floppy 8, 15 Jul 28
15:44 /dev/mobile15

brw-rw---- 1 root floppy 8, 2 Jul 28
16:06 /dev/mobile2

brw-rw---- 1 root floppy 8, 3 Jul 28
15:44 /dev/mobile3

brw-rw---- 1 root floppy 8, 4 Jul 28
15:44 /dev/mobile4

brw-rw---- 1 root floppy 8, 5 Jul 28
16:06 /dev/mobile5

brw-rw---- 1 root floppy 8, 6 Jul 28
15:44 /dev/mobile6

brw-rw---- 1 root floppy 8, 7 Jul 28
15:44 /dev/mobile7

brw-rw---- 1 root floppy 8, 8 Jul 28
15:44 /dev/mobile8

brw-rw---- 1 root floppy 8, 9 Jul 28
15:44 /dev/mobile9

Â

Now you can mount the
first partition to /mnt:

Â

OnRISC: How to bound USB mass storage device to some specific mounting point?

mount /dev/mobile1 /mnt

Â
