

## *CAN Adapters: What to do if Error LED is permanently on?*

If the Error LED is permanently on and bit 7 of the status byte is set, then VSCAN device has detected a Bus Error. The most usual cases are:

- wrong bitrate, i.e. your VSCAN device uses other bitrate than the target CAN device
- wiring is wrong, check if you all three wires (CAN\_H, CAN\_L and GND) are properly connected and terminated with necessary resistor values
